

# Foot and Ankle Conditions and Treatments

## FOOT AND ANKLE SURGERY

We offer comprehensive foot and ankle care, treating problems from bunions to deformities and disorders of the foot and ankle, including fractures. While many foot and ankle problems can be remedied with conservative care, including correctional orthotic devices, we also treat a variety of serious injuries and disorders using sophisticated surgical techniques such as internal fixation, ankle arthroscopy, and ankle replacement.

### Frequently Treated Problems

- Bunions
- Hammertoes
- Ankle arthritis
- Foot and ankle fractures
- Achilles' tendon problems
- Athletic injuries
